PROFILE

Information Technology student with a strong foundation in Java, Python, data structures, algorithms, databases, data warehousing, and ETL, with hands-on experience building a Java-based sales data pipeline, an edge-AI human activity recognition system, and an NLP text-processing workflow. Familiar with data validation, SQL (MySQL), and object-oriented programming, with additional experience in React and TypeScript. Comfortable owning a feature end-to-end, from clean, tested code to debugging in production. Motivated to contribute to a full-stack engineering team and grow into scalable data and analytics solutions.

EXPERIENCE

Team Lead | Smart India Hackathon (SIH) 2026 2026

- Led team OrbitroNyx for problem statement SIH26174 (Space Technology, Software category), advancing to the top 20 in the internal round.
- Proposed and designed HOMOSENSYS, an edge-AI human activity recognition and microgravity monitoring system for on-board astronaut experiments, using computer vision (YOLO, OpenCV), FastAPI, AWS, and PostgreSQL.
- Architected a multimodal fusion approach combining visual activity detection with biometric and payload telemetry for real-time, on-device monitoring with zero dependency on ground links.

Content Lead | Hacktropica 2025

- Led content and communication workflows for announcements, onboarding, and participant engagement.
- Coordinated live updates, issue resolution, participant support, FAQs, and escalations.

Team Lead | Smart India Hackathon (SIH) 2024

- Led BharatCulture from ideation and development to final submission; coordinated tasks, milestones, and documentation.
- Built responsive React interfaces and core user workflows.

Team Lead | Hack4Bengal Hackathon 2024

- Designed and built CareerCraft, an AI career guidance platform using React and TypeScript.

PROJECTS

Sales ETL Dashboard | Java, OOP, Java Streams, Swing, CSV

- Built a Java ETL pipeline to extract, clean, and validate sales data from CSV files, automatically flagging and skipping records with missing or malformed fields.
- Used the Java Streams API to aggregate revenue by region and by product, applying grouping and summing operations across cleaned records.
- Designed a Swing GUI with file selection, live result tables, a run log, and CSV export, structuring the codebase into separate data, logic, and UI classes.

AuraSafe – Personal Safety Web App | React, TypeScript, Vite, Tailwind

- Built a responsive real-time personal safety web application with SOS alerts and live location tracking for use in emergency situations.
- Implemented reusable UI components with TypeScript and Tailwind CSS, using Vite for a fast development/build workflow.

Customer Reviews Clustering | Python, NLP, TF-IDF

- Processed and cleaned a customer review dataset (tokenization, stopword removal, lemmatization), then converted text to TF-IDF features.
- Applied unsupervised clustering to group reviews by theme, practicing core NLP and data preprocessing techniques.

EDUCATION

B.Tech in Information Technology | Asansol Engineering College | 2023 – 2027 | CGPA: 8.1063

Relevant Coursework: Data Warehousing, Distributed Systems, Data Structures & Algorithms, Object-Oriented Programming, Database Management Systems

CISCE Schooling | De Nobili School, CMRI | 2008 – 2022

SKILLS & ABILITIES

Languages: Java, Python, JavaScript, TypeScript, C

Core CS: Object-Oriented Programming, Data Structures, Algorithms

Web: React.js, HTML, CSS, Tailwind CSS, Vite, Node.js, Django

Data: SQL (MySQL), Pandas, NumPy, TF-IDF, Unsupervised Learning, Matplotlib

Tools: Git, GitHub, VS Code

CERTIFICATIONS & RESEARCH

DevOps and DevSecOps – Simplilearn (Aug 2026) | Code Clash – Unstop (Jan 2026) | Tata Elxsi (Jun 2025)

Frontend Development – OneRoadmap (Jul 2025) | Java Programming – OneRoadmap (Jul 2025) | Kshitij 2025 Technical Event Participant – IIT Kharagpur (Sep 2025)

Research Presenter, NCCCI 2025 – "Advances in Early Detection and Personalized Treatment of Breast Cancer" (Feb 2025)
